STAINLESS STEEL GETS A NEW SPARKLE

- Earth Friendly Products' stainless steel cleaner: good for your kitchen;
good for your family -

WINNETKA, III. October 15, 2009– Earth Friendly Products is on a crusade to safeguard your home from damaging and unhealthy chemicals, and it is salvaging your stainless steel appliances in the process. From the leader in the development and production of environmentally friendly cleaning supplies comes the Stainless Steel Cleaner & Polish, a tough-on-grime, but easy-on-appliances solution in two fresh formulas.

Made with certified USDA National Organic Program essential oils, the Stainless Steel Cleaner & Polish is the only "green" cleaner created especially for metal surfaces. Perfect for use on stainless steel, aluminum, brass, chrome, copper, zinc, and silver, Earth Friendly Products' Stainless Steel Cleaner & Polish is made with 100% sustainable, plant-based ingredients that naturally deep clean, polish, and protect metal sinks, appliances and counterspace.

The soy-based formula dries quickly to a bright sheen without leaving streaks or oily residue, while the orange oil in water emulsion relies on the deep degreasing power of orange oil to cut through kitchen grease with no dwell time required. The neutral pH of both formulas won't discolor surfaces, protecting against water spots, fingerprints and stains.

STAINLESS STEEL CLEANER AND POLISH 2-2-2

Most notably, both are free of harsh chemicals, such as phosphates and formaldehydes found in other cleaners, and are created with only replenishable and sustainable plant-based ingredients that are safe for people, pets and the planet.

The Stainless Steel Cleaner & Polish is available nationwide.
